

# Why ProGibb® SG?

## Proven results

- ProGibb SG is the only formulation of gibberellic acid that has been scientifically proven to safely increase pasture production.
- Over 5 years of replicated trials, pilot farm studies and laboratory analysis has proven the ProGibb SG formulation.
- Dr Doug Edmeades has independently reviewed ProGibb SG's comprehensive trial work and concluded that ProGibb SG performs.

## Patented soluble granule formulation

ProGibb SG is a highly soluble formulation. ProGibb SG must be absorbed through the pastures limited leaf area after it has been grazed. A highly soluble formulation is crucial as it allows for maximum and uniform absorption through what little leaf area there is on the pasture at that time. See reverse for more detail.

## Quality

ProGibb SG is a quality product formulated in the U.S.A under strict manufacturing processes.

## Not all gibberellins are created equal

ProGibb SG's solubility was tested side by side in a laboratory against a 900g/kg gibberellic acid-PastureGibb™. The same amount of active ingredient of each product was dropped into two identical beakers of water. The results are clear. ProGibb SG is highly soluble. It dispersed in under 30 seconds and was virtually completely dissolved in 90 seconds. After 8 minutes the other formulation is yet to fully dissolve.
